

NEW! Crown calibration process for seating in 5-minutes or less, every time

ROE is dedicated to advancing the scientific understanding of crown calibration, with the goal of achieving predictable 5-minute, or less, seating times.

Our **Calibrate for Consistency** program is exclusively offered to a select group of crown doctors.

Beginning with your digital or analog records, ROE will be searching for areas of improvement spanning preference definitions, CAD library selection, crown design, carving, and staining. Our goal is to translate these touchpoints into standardized protocols that yield precision tailored crowns.

Participation Overview

This calibration program relies on participant feedback of 13 crowns. Practices will receive a \$500 discount upon completion of the program. The program includes:

- **Online meeting** to establish calibration baselines
- **Feedback from 13 crowns** for fine-tuning protocols
- **\$500 discount** towards future cases for successful program completion

Program participation is voluntary, and participants can stop at anytime.

Join us by registering for Calibrate for Consistency today.

Be part of the team bringing the science of consistent crown predictability within reach!
