

All-Acrylic Partial or Unilateral (Nesbit) Partial

Overview

Acrylic partial dentures offer a budget-friendly solution that can be easily modified and repaired. While not as sturdy as other materials, they are lightweight and can work well as a temporary solution or for patients who need a flexible treatment option. These dentures can be adjusted easily and are typically more comfortable at first, though they may need more frequent maintenance over time.

With all-acrylic and unilateral (Nesbit) partial dentures, simply capture records and seat on the next appointment.

TECHNOLOGY & MATERIALS

- ☐ *Optional:* IOS scanner
- ☐ *Optional:* PVS impression material
- ☐ Pressure indicating paste
- ☐ Denture polishing and finishing tools

All-Acrylic Partial Workflow

1. Take the following photos with the patient standing up:

- Full-face full-smile
- Full-face exaggerated smile
- *Optional:* Full-face profile

2. *Optional:* If the patient has an existing prosthesis, seat before capturing records. Capture records including:

- Capture IOS scan of upper, lower, and bite, OR
- Capture physical impression and bite

-
3. Send your records to ROE and complete the Rx via www.roedentallab.com/upload. If using an IOS, submit your scans via the IOS portal, OR export your .STLs and upload to the ROE portal.

4. Use pressure indicating paste to determine pressure areas. Make adjustments as necessary, finish, and polish.

5. Seat the new final partial denture.
